To All,

I have put together a CAD drawing of the proposed cabinet that would house the HF radio equipment in the SATERN trailer. This cabinet would be mounted on the counter top at the rear of the trailer. Some key points:

- It is shown with the front cover removed. The actual cabinet will have a cover.
- The basic dimensions are 48" long X 18" wide X 24" high.
- I show the cubbies vertically. They could be horizontal as well.
- I did not show the cutouts for the cable routing.
- I did not show any ventilation openings.

I am asking for your input on this design. Feel free to mark up the drawing and send it back to me. Anything is fair game - size, shelving, etc. Also give me some ideas of the ventilation aspect. There is a potential that when this trailer is used as a canteen there would be cooking going on so some sort of vent ducts with removable covers might be in order. Some ideas for mounting the equipment in the cabinet would also be helpful (such as hang the radio or mount it on the base or shelf, etc.).

Thank you for your input.
